Weekly Crop & Weather Roundup

For The Week Ending April 27, 2003

Good week for Field Work: There were 5 days suitable for field work. Soil moisture was rated as 6 percent very short, 8 percent short, 70 percent adequate and 16 percent surplus. Principle farm activities included hauling manure; spreading lime and fertilizer; spraying herbicides; cultivating fields; planting oats, barley, alfalfa, potatoes, and corn; fixing fences; and caring for livestock

Crops: Warmer dryer weather permitted farmers to spend most of the week working in the fields. Some areas of Pennsylvania experienced thunderstorms and/or snow, limiting the amount of tillage completed. Percent of spring plowing completed jumped to 42 percent, up 22 percent from last week but still 22 and 12 percent behind 2002 and the five-year average, respectively. The percent of winter wheat headed increased to 12 percent, 7 percent ahead of last year and 8 percent ahead of the five-year average. The wheat condition improved slightly, with 1 percent rated very poor, 8 percent poor, 19 percent fair, 60 percent good and 12 percent excellent. The oat condition improved slightly as well, with 2 percent rated very poor, 9 percent poor, 34 percent fair, 50 percent good and 5 percent excellent. The percent of oats planted increased to 53 percent, 20 percent higher than last week but still 8 percent behind last year's pace. The percent of oats emerged advanced to 12 percent, 25 percent behind 2002 and 16 behind the five-year average. The percent of barley headed increased greatly, from 3 percent last week to 27 percent this week. This percent increase is on pace with 2002 and the five-year average. Farmers nearly finished planting tobacco this past week. The alfalfa stand condition held steady, with 2 percent rated very poor, 4 percent poor, 25 percent fair, 56 percent good and 13 percent excellent. Timothy clover condition improved slightly, with 4 percent rated very poor, 4 percent poor, 27 percent fair, 59 percent good and 6 percent excellent.

PA Crop Progress for Week Ending April 27, 2003

Crop	Current Week	Last Year	5-Year Average
Percent			
Spring plowing	42	64	54
Corn, Planted	5	12	8
Barley, Headed	27	29	25
Winter Wheat, Headed	12	5	4
Oats, Planted	53	61	54
Oats, Emerged	12	37	28
Tobacco, Planted	100	100	100
Potatoes, Planted	10	12	15
Peaches, Pink	95	0	73
Peaches, Full	78	0	62
Cherries, Pink	72	0	73
Cherries, Full	31	0	66
Apples, Pink	75	0	52
Apples, Full	62	0	39

LIVESTOCK: With warmer temperatures and more sunshine, the pasture condition was able to flourish and improve. Only 2 percent of pasture land was rated very poor, 8 percent was poor, 37 percent was fair, 45 percent was good and 8 percent was excellent. A few farmers are reporting that cold, wet weather is till hampering pasture development, however.

U.S. As Of April 20, 2003: Highlights: Field preparation and planting resumed in the Southeast and Tennessee Valley as excess moisture gradually drained from soggy fields. Warmer-than-normal temperatures early in the week encouraged farmers to prepare soils for planting many areas of the Corn Belt and Great Plains. Later in the week, rainfall brought nearly all fieldwork to a halt, then high temperatures and strong winds negated much of the benefit from the showers activity in some areas. The precipitation in the Rocky Mountains provided slight improvement to the crop condition and soil moisture. Excellent weather along the Gulf Coast allowed field activity to escalate. Late-season showers provided relief to the Pacific Coast and Great Basin, while delaying fieldwork and planting. Corn: Planting was 12-percent complete, the same as this time last year but 2 percentage points ahead of the 5-year average. Planting was very active in the central Great Plains and middle Mississippi Valley. Planting resumed as the soil dried in the Atlantic Coastal Plain. Winter Wheat: Ten percent of the Nation's winter wheat was headed, ahead of last year's 8 percent but slightly behind the 5-year average of 11 percent. Warmer-than-normal weather accelerated wheat development in the southern Great Plains, lower Mississippi Valley, and Southeast. Small grains: The barley crop was 22-percent seeded, compared with last year's 14 percent and the 5-year average of 18 percent. Even though temperatures were slightly below normal, planting continued in the Pacific Northwest. Above-normal temperatures continued to encourage barley planting in the northern Great Plains. The oat crop was 34-percent seeded and 7-percent emerged. Planting was ahead of last year's pace of 30-percent seeded, while emergence was slightly behind at 4-percent. The warm, dry weather conditions encouraged planting throughout the Corn Belt and Pennsylvania.

PA Crop Condition for Week Ending April 27, 2003

Crop	Very Poor	Poor	Fair	Good	Excellent
Percent					
Winter wheat	1	8	19	60	12
Oats	2	9	34	50	5
Alfalfa stand	2	4	25	56	13
Timothy clover stand	4	4	27	59	6
Pasture conditions	2	8	37	45	8

INTERNET REPORTERS' COMMENTS, By County:

*Reporters are from Extension Service, Natural Resources Conservation Service,
Farm Service Agency, farmers, commodity specialists, or other knowledgeable individuals.*

"The weekend brought good weather for plowing and planting spring grains. Farmers were busy hauling manure, spreading lime and fertilizer, and spraying herbicides. Some fields in our county are surprisingly dry for this time of year which has us concerned about a drought. But for right now it is good to get into the fields and get the crops planted."

---Ron McCorkle, Crawford County

"Many farmers have applied winter-stored manure to fields and cleaned out heifer barns. The past week many acres of oats, corn and potatoes were planted. This spring has been very dry and plowing is tough."

---Thomas Tanner, Forrest County

"A couple of cold, snowy days held up progress early to mid week, but by Friday, fields were dry enough to let farmers get back on track with plowing, disking, and planting oats."

---Wes Ramsey, Warren County

"The first real week of weather which permitted field work. Early spring plowing underway."

---John C. George, Bradford County

"Wet cool weather continues to slow field work. Some oats are beginning to emerge. Forages are doing well where cattle were not pastured too soon."

---Burell Whitworth, Clinton County

"Weather was fair to good this week for field work. Plowing, disking and planting of oats, barley, alfalfa. Ground moisture is low to adequate. Would be nice to have a good soaking rain again."

---Pamela Barnes, Tioga County

"Finally, lots of field work being done. Many fields of oats were planted. Wheat was sidedressed. Pastures and grasses are greening up."

---Dolly Little, Cambria County

"Corn planting just beginning last week. All the bugs should be worked out and producers will be really into planting corn this week. Many forage producers will delay planting alfalfa this spring until August due to lateness of spring. Soil temperatures in the low 50's range. Rye chopping will occur this week too."

---Paul H. Craig, Dauphin County

"Finally dry enough to get oats planted. Hope to start working corn ground this week. Pastures are greening up, but slowly due to the very cold weather we have been having all spring. Half an inch of rain Monday but at least no snow!!!"

---Marina K., Huntington County

"Half an inch of rain this past week. Ground drying out nicely, will start to chisel this coming week. Need to empty the manure pit first."

---Viola Pfleegor, Northumberland County

"Extremely warm weather early in week--80 degrees, with cool down at end of week into the 50's. Heavy frost toward end of week with temperatures in the 20's. May have done some limited damage to peach and apple crop. Warm weather has moved fruit trees rapidly into and past full bloom. Good weather has allowed for ploughing and planting of oats."

---Tom Sierzega, Washington County

"Some corn being planted early to try to get corn silage by early August to help with feed supplies that are short after last year's drought. Another good week of progress with tillage and with planting oats and alfalfa. Heavy frost and temperatures in the 20's on Thursday morning."

---John Lohr, Westmoreland County

"Fields were "heavy" all week but lots of fertilizer and manure were run on. Some starting to spray for timothy mites."

---Russ McLucas, Fulton County

"Busy week with soil preparation, planting alfalfa and oats, and with harvesting of rye for silage."

---Bob Anderson, Lancaster County

"Spotty thunderstorms Monday night dropped nearly an inch of rain in spots and kept tillage to a minimum this week. Spraying wheat and hay fields, hauling manure and planting some oats were the main activities this week. Little if any corn is in the ground yet. With warm and dry weather in the forecast, next week will be busy."

---Andrew Frankenfield, Montgomery County
